

# Fuel Stop Analyzer™

## Fuel Stop Analyzer™

Determining potential fuel stops on long range legs can be difficult and time consuming. However, using proven and efficient methods can help identify the most suitable fuel stops and evaluate fuel prices at each location.

Air Routing International's Fuel Stop Analyzer is an intuitive, self service tool that removes the guesswork out of selecting fuel stops on max endurance legs.

Fuel Stop Analyzer quickly determines your selected aircraft's performance per leg by automatically comparing the manufacturer's endurance and trip leg distance. The result provides an estimate of range limitations and geographical fuel stop locations for each leg.

To learn more about Fuel Stop Analyzer's role in your flight department, please contact your [Air Routing Account Manager](#) or visit our website at [www.AirRouting.com](http://www.AirRouting.com)
